TANZANIA NRM IEE AMENDMENT #1 2018-2020: STEWARDSHIP OF NATURAL RESOURCES IMPROVED

USAID 216 SIMPLIFIED AMENDMENT TEMPLATE VERSION 2, APRIL 2018
1.0 PURPOSE AND SCOPE

The purpose of this IEE Amendment is to extend the expiration date of the Ag and VC IEE.

**Extend the Expiration Date:** The Agricultural Productivity and Profitability Increased in Targeted Value Chains IEE expiration date is extended from October 1, 2020 to September 31, 2021 to coincide with the expiration date of the Agricultural Productivity and Value Chains (APVC) (IR 2.2) Project Appraisal Document (PAD). The APVC PAD was extended from October 1, 2020 to September 31, 2021. This 12-month extension is intended to allow the Mission time to develop a new PAD and draft a new IEE(s) related to an upcoming new Country Development Cooperation Strategy.

There are no new activities proposed, and therefore, this amendment is an administrative change. The project activities currently operating under this IEE will continue to do so and are expected to report on the timelines contained therein until a new IEE is in place for the program.
2.0 CERTIFICATION OF COMPLIANCE

All other aspects of the project design/activities and geographic scope remain unchanged from previous environmental analyses.

Annual Work Plans have been verified to undertake only those activities originally proposed, and all reporting requirements have been adhered to and remain unchanged. This project and the activities approved under it are in compliance.

There has been no change to the climate risk screening/management of the project in accordance with Mandatory Reference for ADS Chapter 201 on Climate Risk Management for USAID Projects and Activities. The APVC PAD, and the six activities under the PAD, were designed in 2014 before the mandatory climate risk screening became operational. However, in June 2016 USAID/Tanzania conducted a Climate Change Adaptation and Resilience: Best Practice Review and Strategic Audit of mission activities (Appendix A\(^1\)). The audit assessed the agriculture sector and determined there were 11 risks (six direct and five indirect), eight of which (four direct and four indirect) are addressed in the AVC PAD. Four of the six activities in the 2.2 PAD have climate change adaptation strategies and/or interventions.

Thus, there is no need to do a Climate Risk Management (CRM) analysis now, as the Climate Change Adaptation and Resilience: Best Practice Review and Strategic Audit was done in 2016, two years into the APVC PAD's life, and the Climate Change Best Practice Review was used to adjust the Agriculture and VC programs.

The new APVC PAD and IEE being developed will undergo a CRM analysis.

3.0 REVISION

Per 22 CFR 216.3(a)(9), when ongoing programs are revised to incorporate a change in scope or nature, a determination will be made as to whether such change may have an environmental impact not previously assessed. If so, this environmental analysis will be amended to cover the changes. Per ADS 204, it is the responsibility of the USAID Agreement/Contracting Officer’s Representative to keep the Mission Environment Officer, Regional Environment Advisor, and Bureau Environment Officer informed of any new information or changes in the activity that might require revision of this amendment and environmental determination.

APPENDIX A:

USAID/Tanzania Climate Change Adaptation and Resilience: Best Practice Review and Strategic Audit (2016).

\(^1\)To enhance the retrievability of this report, it is appended to this IEE Amendment (Appendix A).
USAID APPROVAL OF AMENDMENT TO IEE

PROJECT/ACTIVITY NAME: Agricultural Productivity and Profitability Increased in Targeted Value Chains
